

APPLICATION OF PARALLEL CALCULATIONS AT THE SOLUTION OF INFORMATION PROTECTION PROBLEMS

L.K. Babenko, E.A. Ishchukova, I.D. Sidorov

Given work considers questions of application of the distributed multiprocessing calculations for reduction of time of the analysis of modern cryptographic systems of protection of information. The experimental data received on the basis of realization of parallel analysis algorithms of symmetric and asymmetric algorithms of enciphering are given.

Key words: *cryptology, cryptanalysis, methods of factorization, number field sieve, parallel sieving, Gaussian elimination, secret key, block cipher, strength, multiprocessing calculations.*
